

# The Insurance Data Network

## Welcome to the future of data sharing

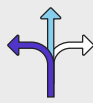

IDN is an innovative multi-insurer data exchange that provides real-time insights to enhance fraud detection across the claims lifecycle. A powerhouse of cross-carrier data, IDN unlocks new levels of fraud detection impact.

**Cross-carrier  
visibility**

**Actionable  
insights**

**Real-time automated  
intelligence**

**Data ownership  
& control**

On average, detected fraud networks increase **3x** in size with IDN

### Basic Claims Fraud Detection

Internal rules & models are limited to individual claims fraud detection, blind to suspicious provider and network behavior.

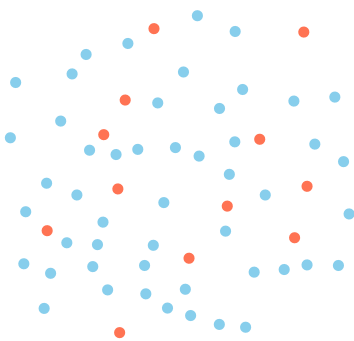

### AI-Powered Claims Fraud Detection

Advanced network and provider detection identifies suspicious behavior earlier, leveraging single insurer claim data to uncover potential issues.

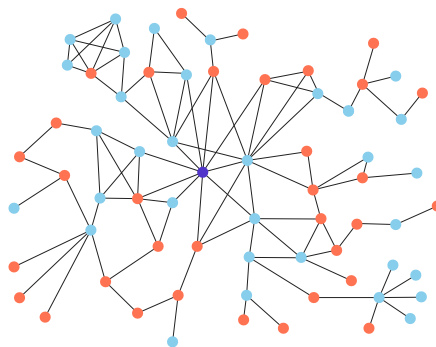

### Claims Fraud Insights & Detection with IDN

IDN provides a comprehensive industry-wide view of fraud using cross-carrier prior loss claim and provider data. Automatically and proactively identifies problematic provider and network behavior.

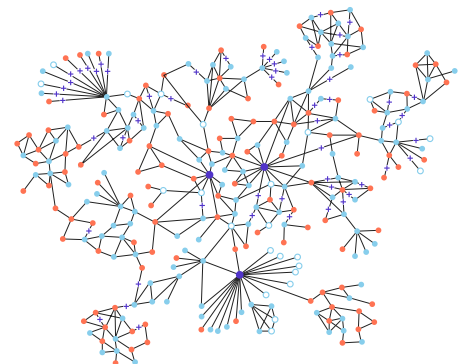

Case Study: Top 25 carrier spots and stops extensive fraud network with IDN.

No networks detected  
12 suspicious claims

Small network of entities and providers  
34 suspicious claims

Large network of entities and providers  
112 suspicious claims  
24 investigated by other SIUs
